- 14 Daily workflow and tips
- 15 Troubleshooting

1. What Chay Ops does

Chay Ops is a web app for Philippine small businesses. It keeps day-to-day store numbers in one place so you can see cash, stock, and profit without a spreadsheet maze.

- Record daily sales (cash, GCash, Maya, card, bank transfer)
- Log operating expenses and inventory losses
- Track SKUs, quantities, costs, and low-stock alerts
- Record capital in, extra investment, and owner withdrawals
- Preview and export P&L, inventory value, KPI, and capital reports
- Control access with Owner, Manager, and Staff roles

Open the app in a browser at `http://localhost:3000` (local) or your deployed URL. The layout is mobile-friendly and can be installed as a PWA from the browser.

2. Getting started

Sign in

1. Go to the login page (`/login`).

2. Enter your email and password.
3. Click **Enter dashboard**.

On a fresh database with no users yet, click **Load demo data** first. That creates sample accounts, inventory, sales, expenses, and capital so you can explore immediately.

Demo accounts

Role	Name	Email	Password
Owner	Maria Santos	owner@chay.ph	password123
Manager	Juan Dela Cruz	manager@chay.ph	password123
Staff	Ana Reyes	staff@chay.ph	password123

Change these passwords before using Chay Ops with real store data. Demo load replaces existing users, transactions, inventory, capital, and alerts.

Sign out

Use **Sign out** at the bottom of the left sidebar. You return to the login screen.

3. Roles and permissions

What you can see and change depends on your role.

Capability	Owner	Manager	Staff
Dashboard	Yes	Yes	Yes
Revenue, expenses, inventory	Yes	Yes	Yes
Alerts	Yes	Yes	Yes
Reports (preview / CSV export)	Yes	Yes	No
Capital	Yes	No	No
Manage users	Yes	No	No

Staff who open Capital or Users are sent back to the Dashboard. Managers do not see Users or Capital in the menu.

4. Finding your way around

After login you land on the Dashboard. The left sidebar lists modules. On a phone, tap the menu icon in the header to open it.

Menu	Path	Use it for
Dashboard	/	KPIs, trends, low stock, recent alerts
Revenue	/revenue	Daily sales entries
Expenses	/expenses	Costs and losses
Inventory	/inventory	SKUs, stock, import
Capital	/capital	Investments and withdrawals (owner)
Reports	/reports	P&L and exports (owner / manager)
Alerts	/alerts	Notifications
Users	/users	Invite staff (owner)

The bell in the header also opens Alerts. Amounts throughout the app are shown in Philippine pesos (PHP).

5. Dashboard

The Dashboard is the daily health check. Cards include:

- **Revenue MTD / YTD** — sales this month and this year
- **Net Profit MTD** — revenue minus expenses and losses, with net margin
- **Gross Margin** and expense ratio
- **Cash Position** and working capital
- **Inventory Value** and active SKU count
- **Low Stock Alerts** — items at or below reorder level
- **Inventory Turnover** — $\text{COGS} \div \text{inventory value (month-to-date)}$
- **ROI on Capital** — return versus capital deployed

Below the cards you will see a 6-month revenue vs expenses chart, this month's expense mix, a low-stock list, and recent alerts. Use **Manage** to jump to Inventory or **View all** for Alerts.

If the Dashboard shows an error and MongoDB is empty, open Login and click **Load demo data**.

6. Revenue

Use Revenue to record collections as they happen (or at end of day).

1. Open **Revenue**.
2. Enter **Amount (PHP)**.
3. Write a short **Description** (for example, "Walk-in tea sales").

4. Confirm the **Date**.
5. Choose a **Payment method**: Cash, GCash, Maya, Card, or Bank transfer.
6. Add an optional **Reference** (OR number, GCash ref, etc.).
7. Click **Save revenue**.

Saved entries appear in **Recent revenue** with a running total of listed sales. Enter one row per batch or till close — whichever matches how your store counts the day.

7. Expenses and losses

Open **Expenses** to log operating costs and inventory damage.

1. Set **Type** to Expense or Loss / damage.
2. Enter amount, category, description, and date.
3. Click **Save entry**.

Categories: COGS, rent, utilities, payroll, marketing, supplies, transport, damage, other.

Use **Expense** for rent, salaries, restocking, and utilities. Use **Loss / damage** when stock is broken, expired, or otherwise written off. Both reduce profit; losses are meant for inventory write-offs rather than ordinary bills.

8. Inventory

Add an item

1. Open **Inventory**.
2. Fill SKU, name, category, quantity, reorder level, unit cost, sell price, and location (default: Main Store).
3. Click **Add inventory item**.

SKU should be unique (for example TEA-001). Selling price may be 0 for supplies you do not sell.

Search and adjust stock

Search by SKU, name, or category, then click **Search**. On each row, + and – change quantity by one. Quantity at or below reorder level is highlighted in amber and counted on the Dashboard as a low-stock alert.

Import CSV / Excel

Click **Import CSV/XLSX** and choose a file. Rows are matched on SKU (upsert). Suggested columns:

Column	Example
sku	TEA-001

Column	Example
name	Jasmine Green Tea 250g
category	Tea
quantity	42
reorderLevel	15
unitCost	180
sellingPrice	280
location	Main Store

9. Capital

Owners use Capital to record money put into the business and money taken out.

- **Initial capital** — starting funds
- **Additional investment** — later cash-in
- **Withdrawal** — owner draw

The page shows Invested, Withdrawn, and Net capital. Save an amount, description, and date to append the ledger. Net capital feeds Dashboard ROI and cash-related KPIs.

10. Reports

Owners and managers can generate:

- Profit & Loss
- Inventory valuation
- KPI summary
- Capital movements

1. Choose report type.

2. Optionally set From and To dates.

3. Click **Preview** to view on screen, or **Excel/CSV** to download a file that opens in Excel.

Use date ranges for monthly close or investor packs. Leave dates blank to use the default period for that report.

11. Alerts

Alerts cover low stock, cash warnings, KPI notices, and info messages. Unread items are highlighted. You can mark one alert as read or click **Mark all read**.

After demo data is loaded you should see a welcome message plus any low-stock items that already sit under their reorder level (for example Earl Grey, bottled cold brew, and paper cups in the sample catalog).

12. Users

Only the Owner can open Users. To invite someone:

- 1. Enter full name, email, a temporary password, and role (owner / manager / staff).
- 2. Click the save / invite action.

Give the person their email and temporary password, then ask them to sign in at the login page. Share only the access they need: Staff for encoding, Manager for operations and reports, Owner for capital and user admin.

13. Sample / demo data

Sample data is already loaded in the connected database (and can be reloaded from Login → **Load demo data** or `npm run seed` while the app is running).

The demo store is a tea / café operation with about six months of activity:

Area	What was loaded
People	Maria Santos (owner), Juan Dela Cruz (manager), Ana Reyes (staff)
Capital	₱500,000 initial · ₱100,000 extra investment · ₱25,000 owner draw
Inventory	TEA-001 Jasmine Green Tea, TEA-002 Earl Grey (low stock), SNK-010 Pandesa Cookies, BEV-020 Cold Brew (low stock), MER-030 Ceramic Mug, SUP-040 Paper Cups (low stock)
Sales	Walk-in tea, café beverages, gift sets, catering, weekend promos — cash and GCash
Costs	Monthly restock (COGS), rent ₱25,000, utilities, payroll ₱48,000, plus a ₱2,200 damage loss

Reloading demo data wipes current operational records. Do not click Load demo data on a live store unless you intend to reset.

14. Daily workflow and tips

- 1. **Morning:** Sign in as Staff or Manager. Check Dashboard low stock and Alerts.
- 2. **During the day:** Encode revenue as tills close. Log purchases and bills on Expenses as receipts arrive.
- 3. **Stock:** Use + / – for small adjustments; import a file after a full count.
- 4. **Week / month end:** Manager or Owner opens Reports → P&L and KPI, then downloads CSV for the accountant or investor.

5. **Owner only:** Record extra capital or withdrawals on the same day they happen so cash position stays honest.

Encode in PHP. Use consistent descriptions ("Store rent", "Staff salaries") so expense charts stay readable. Keep SKUs stable so imports update the same items instead of creating duplicates.

15. Troubleshooting

Problem	What to try
Invalid email or password	Confirm the account exists. On a new setup, click Load demo data, then use owner@chay.ph / password123.
Dashboard error / empty data	MongoDB may be empty or unreachable. Check that the app is running and MONGODB_URI in .env.local is correct, then seed.
Cannot open Capital or Users	Sign in as Owner. Staff and managers are blocked from those pages.
Cannot export reports	Staff cannot export. Use a Manager or Owner account.
Import did nothing	For inventory, every row needs sku and name. For transactions, type must be revenue, expense, or loss, and amount must be greater than 0.
Need to start the app	In the project folder run <code>npm install</code> then <code>npm run dev</code> . Open <code>http://localhost:3000</code>
